

TableLocate™

Big Chains offer table delivery – shouldn't you?

The largest restaurant chains are moving to table delivery. Why? Handing out buzzers or asking where Customers sit leads to chaos. And chaos costs money.

It's actually quicker and simpler to deliver to the table – if you use a Table Locator.

Customers appreciate the Table Service dining experience.

The Smart Table Number™

Traditional table numbers work fine, don't they?

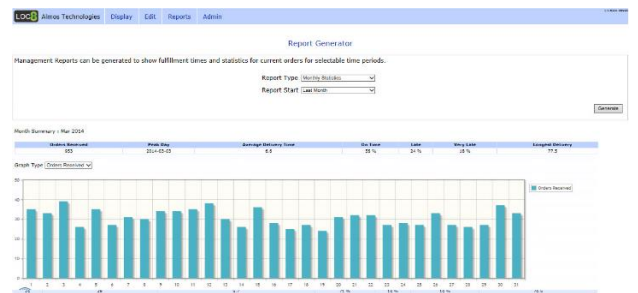

A common solution is handing out table numbers. But staff waste time walking around to find the right customer.

This process is inefficient for the restaurant and frustrating for your customers. Food gets cold and coffee spilled.

Hand out our Flags or Tents. Like a GPS they take staff directly to your Customers.

Customer feedback: LOC8 costs less, is the best. Why?

- World's only Bluetooth location technology that requires no wired ceiling scanners
- Locator beacons can be fitted to any structure, even Garden Umbrellas
- 1hr onsite installation time
- Zone or Precise Table Location
- Our LOC8 router directly talks to Tablets, so there is no PC to maintain. Our advanced technology dramatically reduces Total Ownership Costs

So how does it Work?

Bluetooth Beacons are fitted under table tops or on the ceiling. Customer table number Flags or Tents are detected and displayed on serving counter tablets

1. Hand out Flags/Tents like "old" numbers
2. Customer selects a table
3. Table/Zone displayed on map or list
4. Staff delivers without searching
